Soham Gore

Mumbai, India | acad.soham@gmail.com | linkedin.com/in/sohamgore | github.com/debug-soham

Education

KJ Somaiya School of Engineering, Mumbai — **2024 - Expected 2028**
Bachelor of Technology in Electronics and Computer Engineering — *CGPA: **9.19** / 10 (Till Semester 4)*
Honours in Data Science and Analytics

Technical Skills

Languages & Core Infrastructure: Python, SQL, FastAPI, Flask, Docker, Git
Generative AI & Agentic Systems: LLM APIs, LangChain, RAG, Vector Databases, Agentic Workflows
Deep Learning & ML: TensorFlow, Scikit-learn, XGBoost, CNNs, Random Forest, Pandas, NumPy
MLOps & Interactive Deployment: CI/CD Pipelines, AWS, Streamlit, Model Drift Monitoring

Experience/Internships

Machine Learning Intern — **July 2026 - Present**
FlyRank AI
- **Engineering** end-to-end data pipelines for feature preparation, baseline benchmarking, and model training.
- **Designing** rigid data contracts and leak protection validation layers to bulletproof production inference integrity.
- **Programming** automated diagnostic scripts to systematically package model metrics and performance charts.

Open Source Developer — **August 2025 - Present**
Etsi AI
- **Launched** *etsi-etna* on PyPI, optimizing a neural network framework combining Rust speed and Python runtimes.
- **Engineered** drift detection capabilities within *etsi-watchdog* to automate root-cause analysis of model failures.
- **Managed** architecture as a maintainer, establishing strict automated validation pipelines and release roadmaps.

Technical Team Member — **July 2025 - July 2026**
Datazen Somaiya
- **Led** technical event execution and hackathons to drive student engagement and scale AI literacy programs.
- **Collaborate**d on community projects focused on ethical machine learning frameworks and data-centric applications.

AI & ML Intern — **June 2025 - July 2025**
Elevate Labs
- **Engineered** a CNN architecture achieving 75% accuracy on GTZAN, outperforming baseline models by 12%.
- **Analyzed** Mel-Frequency Coefficients across 1,000 tracks to extract optimized spatial features for training.
- **Optimized** pipelines to handle feature scaling, reducing deep learning model convergence time by 15%.

Open Source Contributor
- **Integrated** advanced LLM APIs and optimized front-end user workflows using Streamlit for the *PaperScope* assistant.
- **Engineered** structural package improvements within *PyDeepFlow* to optimize deep learning framework distribution.
- **Refactored** data extraction algorithms for the *GNews* scraping API and built low-level diagnostic tools for *spewer*.

Projects

SAR Deforestation Monitor High-Performance ML & Geospatial Systems | *Python, XGBoost, Google Earth Engine*
- **Engineered** an automated Google Earth Engine pipeline to ingest Sentinel-1 SAR time-series data.
- **Developed** a multi-threaded Rust kernel (PyO3/Rayon) to drastically accelerate geospatial tensor filtering.
- **Architected** an XGBoost classification engine to detect canopy loss, validating the end-to-end pipeline.

Personal Finance Risk Classifier | *Python, Scikit-learn, Pandas, Seaborn, CLI*
- **Built** a Gradient Boosting model to classify users as Conservative or Aggressive investors based on financial data.
- **Engineered** risk profiles using demographic and behavioural metrics, integrated into an interactive CLI tool.

Relevant Courses & Certifications

Complete Data Science, Machine Learning, DL, NLP Bootcamp – *Udemy, Krish Naik* — **May 2026**
Machine Learning Specialization – *DeepLearning.AI, Stanford Online* — **June 2025**
